

BLOOMICE PFAS DECLARATION OF COMPLIANCE

Declaration

Bloomice acknowledges and supports international and regional regulatory frameworks designed to protect human health and the environment relating to Per- and Polyfluoroalkyl Substances (PFAS).

Regulatory Alignment

Bloomice monitors and aims to comply with applicable PFAS-related legislation and regulatory guidance, including but not limited to:

- EU Persistent Organic Pollutants (POPs) Regulation (EU) 2019/1021
- EU REACH Regulation (EC) No. 1907/2006
- UK REACH Regulation (as retained and amended under UK law)
- United States Environmental Protection Agency (EPA) TSCA Section 8(a)(7) PFAS reporting requirements
- Other applicable regional or customer-specific PFAS restrictions

PFAS Substance Overview

PFAS are a broad group of synthetic fluorinated organic compounds characterised by strong carbon-fluorine bonds, which provide chemical resistance, thermal stability, hydrophobic, and dielectric performance properties. These characteristics can be beneficial in certain high-performance electrical and telecommunications applications.

Bloomice Product Compliance Statement

Bloomice applies responsible design and supply chain due diligence to minimise and control the use of PFAS substances within its products. Bloomice endeavours not to intentionally incorporate PFAS substances into product designs where technically and commercially feasible. Where PFAS-based materials are required to meet defined technical or safety performance specifications, Bloomice will:

- Maintain internal product and material assessment records
- Obtain declarations from relevant suppliers
- Provide disclosure where required by customer or regulatory obligations

At the date of issue of this declaration, Bloomice confirms that PFAS content, if present in specific product materials or components, is used only where essential to achieve functional or regulatory performance requirements and is controlled through supplier verification processes.

Supply Chain Due Diligence

- Bloomice operates supplier compliance programmes which include:
- Material composition declarations
- Environmental and regulatory compliance confirmations
- Periodic supplier compliance review

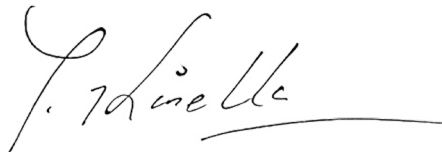

Scope of Declaration

This declaration applies to Bloomice standard antenna and related RF connectivity product ranges unless otherwise stated in product-specific compliance documentation.

Limitation of Liability

This declaration is issued based on Bloomice current knowledge, supplier information, and regulatory understanding at the time of issue. As product usage conditions are outside Bloomice control, Bloomice makes no express or implied warranties and assumes no liability relating to the use of this information.
