

BLOOMICE – RESPONSIBLE MINERALS POLICY STATEMENT

Bloomice defines “Conflict Minerals” as gold, tin, tantalum, and tungsten, including derivatives from cassiterite, columbite-tantalite, and wolframite, irrespective of the country of origin, processing location, or sales destination. Bloomice recognises global concerns regarding the sourcing of these minerals and supports international efforts aimed at preventing the financing of armed conflict, human rights violations, and environmental harm associated with mineral extraction, particularly in the Democratic Republic of Congo and adjoining regions.

Bloomice is committed to responsible sourcing and ethical procurement throughout its global supply chain. The company supports regulatory frameworks and industry initiatives intended to eliminate the use of minerals originating from operations that contribute to conflict or unlawful activity. Bloomice maintains policies and procedures designed to ensure minerals used within its antenna, cable assembly, and associated communication products are sourced in accordance with recognised responsible sourcing standards.

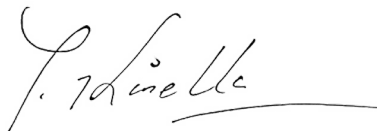

Bloomice commits to supporting applicable legislative requirements relating to conflict minerals. The company will not knowingly procure specified metals sourced from facilities operating within recognised conflict-affected regions unless such facilities are independently verified as conflict-free through recognised certification programmes or industry initiatives.

Bloomice requires suppliers to undertake appropriate due diligence regarding their own supply chains. Suppliers must demonstrate that minerals incorporated into materials or components supplied to Bloomice originate from mines and smelters located outside conflict-affected regions, or from verified conflict-free sources operating within those regions under recognised independent monitoring schemes.

If Bloomice becomes aware that minerals supplied within any product or material originate from facilities determined to be non-compliant with conflict-free sourcing standards, Bloomice will undertake reasonable corrective action. This may include supplier engagement, additional verification activities, or the sourcing of alternative materials from approved responsible sources.

Bloomice remains committed to maintaining high professional, ethical, and environmental standards across all business activities. The company continuously monitors evolving regulatory developments, industry best practices, and supply chain transparency initiatives to support responsible mineral sourcing and strengthen supply chain integrity across global operations.
